

Are these UFOs?

Yellow Submarines?

No, it's BioBlast!

BioBlast, EverBlue's proprietary form of bioaugmentation, adds oxygen-loving friendly microbes to the lake, complementing our aeration system by working to out-compete algae and nuisance plants for excess nutrients and breaking down the 'compost' on the lake bottom.

You may see a few of these inflatable tanks and EverBlue boats around both lakes over the next week or so, as BioBlast is applied.

BioBlast is completely safe and EGLE-approved. There are NO restrictions on the use of the water.
